

Wellcome Trust

Empowering Charity Infrastructure with SD Networking

Challenge

- 1 Legacy network approaching end-of-life
- 2 Devices required individual management
- 3 Required uninterrupted business continuity during upgrade
- 4 Implementation complexity increased by remote working during COVID-19

Solution

Working collaboratively with Wellcome, we designed and implemented Cisco SD-Access and ACI, delivering an integrated solution that allowed interoperability between newly added Cisco technologies and the existing Aruba infrastructure.

Thanks to WhiteSpider, we've successfully transitioned from a single, complex network to streamlined, segmented environments that have significantly improved both operational efficiency and network security.

Chris Dennehy
Network Manager, Wellcome Trust

Uptime during upgrade

Implemented security policies

Results

- ✓ Centralised, policy-based network management
- ✓ Automated security and policy enforcement
- ✓ Improved scalability and operational efficiency
- ✓ Significant time savings through automation
- ✓ Enhanced visibility and control across the network
